## Standby Rating

Standby Rating is selected for supplying emergency power for the duration of normal power interruption. Overload on this rating is not allowed.

From the generator point of view, if the emergency power is required continuously for more than one hour sizing is in accordance with 150°/40° or 163°/27° conditions. Also, if the overload duration is less than one hour, then the generator accepts 10% overload above Prime Ratings for 125°/40° or the 125°/27° ratings.

### In the 'Ratings Book' you can find ratings for:

- ▶ 150°/40°: Peak continuous ratings according to ISO8528-3.
- ▶ 163°/27°: Emergency peak continuous rating, not defined in ISO specification. Suitable for stand-by sizing only.

The ratings are then suitable for supplying continuous electrical power, at variable load, for the duration of any utility power failure. These ratings allow temperature to rise above the temperature rise class H limit which can result in a shorter insulation life. The 10% overload is not available at these ratings.

## Prime Rating

Prime Rating is the maximum power available at a variable load for an unlimited number of hours: it allows the possibility of a 10% overload.

This is equivalent to Prime Power in accordance with ISO8528 and Overload Power in accordance with ISO3046, AS2789, DIN6271, and BS5514. From the generator point of view, it is sized according to the class B, F, H temperature rise requirements or 125°/27° rating.

### In the 'Ratings Book' you can find ratings for:

- ▶ 80°/40°: this condition is equivalent to Class B temperature rise. 10% overload on 1 hour over 6 hours is allowed.
- ▶ 105°/40°: this condition is equivalent to Class F temperature rise. 10% overload on 1 hour over 6 hours is allowed.
- ▶ 125°/40°: this condition is equivalent to Class H temperature rise. 10% overload on 1 hour over 6 hours is allowed.
- ▶ 125°/27°: ratings at this condition are equivalent to those listed for the 150°/40° condition if not listed. 10% overload on 1 hour over 6 hours is allowed.

We suggest that customers contact the local Mecc Alte Sales representative for guidance on generator selection.

# Dynamic Data Support

---

Please note, for the very latest ratings, you are advised to go to the Mecc Alte website [www.meccalte.com](http://www.meccalte.com).

Here you will find our dynamic technical data sheet builder, where you can create your own bespoke data sheet. Following a simple step-by-step process, you can get the information in a format that matches your application and requirement. Picking from a number of variances, you are guided through selection of:

- ▶ Frequency
- ▶ Ambient Temperature
- ▶ Winding
- ▶ Temperature Rise
- ▶ Phase Number
- ▶ Altitude
- ▶ Voltage
- ▶ Ingress Protection (IP) Level

After selecting your chosen data, the data is automatically calculated and you are emailed a customised data sheet showing performance at your specified variants.

Dynamic Data Support

# Altitude Derations/Environmental

## Temperature & Altitude

## Environmental Concerns

## Humidity & Moisture

## Temperature and Altitude

Temperature and altitude – individually or combined, have an effect on the generator power available. Temperature may be considered as both the air inlet to the generator and also the ambient air around the generator. When the ambient air or air entering the generator exceeds 40°C, or 104° F, it becomes necessary to derate the output of the generator.

The chart below gives the recommended amount to adjust for the higher temperatures.

Higher altitudes also require a derate, specifically when it exceeds 3300 ft., or 1000 Meters. Again, please refer to the Altitude Deration Chart below to determine the necessary derate.

### Altitude & Ambient Temperature Deration Coefficients

Altitude (meters)	Ambient Temperature (°C)					
	25	40	45	50	55	60
≤ 1000	1.07	1	.96	.93	.91	.89
> 1000 ≤ 1500	1.01	.96	.92	.89	.87	.84
> 1500 ≤ 2000	.96	.91	.87	.84	.83	.79
> 2000 ≤ 3000	.90	.85	.81	.78	.76	.73

## Environmental Concerns

Generators are often exposed to harmful airborne pollutants, like sand and saltwater which may require some form of protection to reduce or eliminate these harmful agents. Common elements like dirt, gravel or rock dust can create abrasive and potentially damaging effects on the windings of the generator. While the addition of filters, baffles, or housings will certainly help extend the life of the protective insulation, it may be equally effective to overcoat the windings at point of manufacture. It is also extremely important to recognize that filters and other devices can affect the airflow through the generator and create additional heat in the windings. It is also important to understand that the use of filters requires a strict maintenance regime.

Mecc Alte uses premium class H insulation material. Impregnation processes are achieved with the latest

impregnation technologies, like Vacuum Pressure Impregnation (VPI) or with the use of dedicated roll and dip or trickle machines. This impregnation quality process is perfect for the vast majority of applications, however in order to achieve the same results in insulation reliability when environmental or operating conditions are demanding, it is possible to consider one of the additional protection systems offered by Mecc Alte. Please refer to our separate Technical guide: Insulation Protection Systems for further guidance on our; standard, standard +, grey, total and total + systems. Please note on some specific models a slight power de-rate is considered when the total systems are applied.

Please consult your Mecc Alte Representative for application reviews and recommendations.

## Humidity and Moisture

Another common enemy of the insulation system is high humidity, salt air and moisture. While the windings are certainly protected against these conditions, space heaters can be added insurance to promote long life and trouble free operation. The location of the unit

and operating conditions with proper ventilation are both important considerations when determining what protection is required. Once again, please consult your Mecc Alte Representative for assistance in selecting proper protection and modifications.

# Altitude Derations/Environmental

## Ingress Protection IP Ratings

### Ingress Protection IP Ratings

Mecc Alte offers IP23 across its industrial range. Upgrades are available such as IP23+, or upwards; in fact, the whole 4 pole industrial range can be upgraded to IP45 with the fitting of additional IP filter kits.

However, when protecting against ingress, the airflow and cooling is impacted, so for IP45 the following derates can be considered:

### Ingress Protection IP45 Ratings Deration Coefficients

MODEL	DERATE COEFFICIENT	MODEL	DERATE COEFFICIENT	MODEL	DERATE COEFFICIENT

110 ΔΔ / 190 ΔΔ / 220 ΔΔ / 380 ΔΔ / 440 ΔΔ / 760 ΔΔ Volts

All machines have an auxiliary winding 'standard' with 300% short circuit capability.

Indicated rating references to series or parallel star connection as per published table. On ECO40, ECO43 and ECO46, different series/parallel configurations are available on specific request: consult a Mecc Alte representative for more information.

All machines have an auxiliary winding 'standard' with 300% short circuit capability.

Indicated rating references to series or parallel star connection as per published table. On ECO40, ECO43 and ECO46, different series/parallel configurations are available on specific request: consult a Mecc Alte representative for more information.

All machines have an auxiliary winding 'standard' with 300% short circuit capability.

Indicated rating references to series or parallel star connection as per published table. On ECO40, ECO43 and ECO46, different series/parallel configurations are available on specific request: consult a Mecc Alte representative for more information.

All machines have an auxiliary winding 'standard' with 300% short circuit capability.

ECO46: Refer To Factory before ordering to assure winding is available at 600 Volts at the indicated rating.

These are 'special' custom build machines. Check factory for delivery lead times.

All machines have an auxiliary winding 'standard' with 300% short circuit capability.

All the above machines are 12 lead. The Weights are the same as the 'standard' 3 phase Models.

Indicated voltage references to Zigzag connection.

Delta or Double Delta single phase connections available.

Consult Factory to choose for your application.

**RPM:** 1500/1800

**Insulation:** Class H

## Railroad Duty Alternators

Mecc Alte has been building Railroad Duty alternators for over two decades. Designed and manufactured to meet harsh environmental demands for line haul locomotives and switching applications.

Our rugged insulation system, with our unique, overcoat of Butylh Rubber, provides unparalleled mechanical strength and superior protection against airborn rail dust, oil and grease.

Our TE (Totally Enclosed), pre-engineered generators (some are listed below) are becoming the standard for other harsh environmental applications, which include gantry cranes for Asian Port Authorities and off-shore oil platforms on two continents.

### Typical Mechanical and Electrical Specification

Insulation System and mechanical reinforcement:

- ▶ Stator treatments can include additional mechanical bracing, additional lacing on the end turns; VPI treatment, Butylh Rubber overcoat on the windings.
- ▶ Rotor treatments can include VPI application(s), closer machining tolerances on the rotor shaft with shrink collars to prevent core pack movement.
- ▶ Special Lead termination and configurations (long leads, bus bars, etc.) as well as special cable glands, cooling fans, adaptors and mounting reinforcement.

\*According BS 2G 219 – EN2292 – ISO 6858 – Mil Stnd 704F

All machines have an auxiliary winding 'standard' with 300% short circuit capability.

UVR6/1-H400B AVR has under frequency, over voltage protection, 3ph reference; regulation is +/- 1%.

Line Drop Compensator is also available as an option.

Custom projects available for dedicated power nodes.

The following accessories are available upon request for an additional charge:

- ▶ Space Heaters
- ▶ Temperature detectors (thermistors or PT100) for stator windings and bearings.
- ▶ IP45 or IP54 rated enclosure.
- ▶ Paralleling CT's for parallel operation.
- ▶ Black Butyl Rubber overcoat for superior winding protection in hazardous environments as option.
- ▶ Remote voltage control.

2/3 pitch windings with skewed slots for maximum reduction of harmonic content.

4 layers of polyester in addition to a clear varnish and EG43 overcoat on the main and exciter windings is standard on 400 Hz machines.

# 50Hz Connections

The following are the most common connection arrangements utilized with Mecc Alte generators. Always verify that the connections of all the leads from the main stator are consistent with the nameplate voltage required. Connection diagrams are supplied with every generator and should be used as the primary source of information. Please consult the factory for any questions regarding these connections.

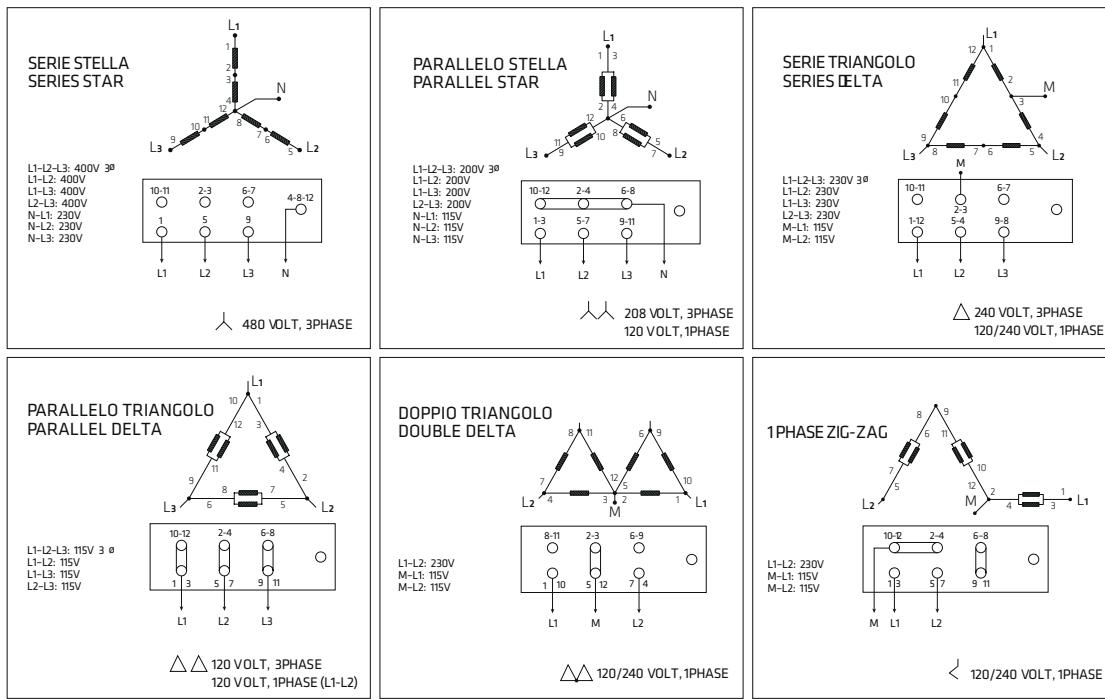

50Hz		Series 3, 28, 31, 32, 34, 38				Series 40, 43, 46			
<b>Series Star</b>	L-L	380	400	415	440	760	800	830	880
	L-N	220	230	240	254	440	460	480	508
<b>Parallel Star</b>	L-L	190	200	208	220	380	400	415	440
	L-N	110	115	120	127	220	230	240	254
<b>Series Delta</b>	L-L	220	230	240	254	440	460	480	508
	L-M	110	115	120	127	220	230	240	254
<b>Parallel Delta</b>	L-L	110	115	120	127	220	230	240	254
<b>Zig-Zag</b>	L-L	330	346	360	380	660	690	720	760
	L-N	191	200	208	220	380	400	415	440
<b>Single Phase Parallel Zig-Zag</b>	L-L	220	230	240	254	440	460	480	508
	L-M	110	115	120	127	220	230	240	254
<b>Single Phase Double Delta</b>	L-L	220	230	240	254	440	460	480	508
	L-M	110	115	120	127	220	230	240	254

In case of single phase load, it is important that the phase current does not exceed the nominal value.

In three phase zig-zag connection the rated power must be multiplied by 0.866.

# 60Hz Connections

The following are the most common connection arrangements utilized with Mecc Alte generators. Always verify that the connections of all the leads from the main stator are consistent with the nameplate voltage required. Connection diagrams are supplied with every generator and should be used as the primary source of information. Please consult the factory for any questions regarding these connections.

60Hz		Series 3, 28, 31, 32, 34, 38				Series 40, 43, 46			
<b>Series Star</b>	L-L	415	440	460	480	830	880	920	960
	L-N	240	254	266	277	480	508	530	554
<b>Parallel Star</b>	L-L	208	220	230	240	415	440	460	480
	L-N	120	127	133	139	240	254	266	277
<b>Series Delta</b>	L-L	240	254	266	277	480	508	530	554
	L-M	120	127	133	139	240	252	266	277
<b>Parallel Delta</b>	L-L	120	127	133	139	240	252	266	277
<b>Zig-Zag</b>	L-L	359	380	400	415	720	760	800	830
	L-N	207	220	230	240	415	440	460	480
<b>Single Phase Parallel Zig-Zag</b>	L-L	240	254	266	277	440	460	480	554
	L-M	120	127	133	139	220	230	240	277
<b>Single Phase Double Delta</b>	L-L	240	254	266	277	440	460	480	554
	L-M	120	127	133	139	220	230	240	277

In case of single phase load, it is important that the phase current does not exceed the nominal value.

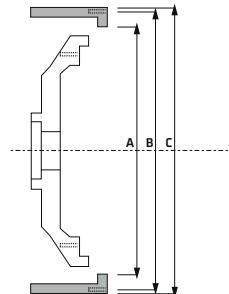

In three phase zig-zag connection the rated power must be multiplied by 0.866.
